Why IBM for data warehouse systems?

In today's era of big data, technology is allowing us to consume more data and generate new insights for competitive advantage. It is mandatory to have fast access to insight and to have the ability to quickly respond to rapidly evolving analytic requirements. At IBM, we recognize you need solutions to respond to these needs and take your data warehouse architecture to the next level. Solutions formerly branded as Netezza appliances have evolved into IBM Db2 Warehouse Systems that provide the speed, simplicity, scalability and analytic power to modernize your data warehouse and respond to today's demands of big data.

Read a number of compelling topics that analyst Claudia Imhoff discusses in [Data Warehouse Appliances and the New World Order of Analytics](#).

In the spotlight

IBM Data Warehouse Systems

IBM Netezza "appliances" are now part of IBM PureSystems and the IBM PureSystems for Analytics has recently seen the announcement of a new offering in this category: the IBM Integrated Analytics System. These offerings maintain the same key design tenets from Netezza for ease of use, performance, scalability and embedded analytics.

Products

IBM Integrated Analytics System

The IBM Integrated Analytics System drives the insights needed to maintain your competitiveness by matching accelerated development and deployment times for your data scientists with a high performance, optimized and cloud-ready data platform.

[Learn more](#)

IBM PureData System for Analytics

Powered by Netezza technology, IBM PureData for Analytics helps simplify and optimize performance of data services for analytic applications, and runs complex algorithms in minutes instead of hours.
